PROJECTS

Journey Air – Passenger Certainty Platform

Jan 2026 – May 2026

Honeywell Aerospace Industry Sponsored Project — ASU TMC 593

- Led a **4-member cross-functional team** across research, engineering, UX, and business workstreams using Agile sprints tracked in Notion, delivering prototype, business case, and executive presentation **on schedule**.
- Reframed core problem from “lack of information” to “passenger uncertainty” through **2 rounds of customer discovery interviews**, producing a 6-persona Customer Journey Map that directly reshaped the solution architecture.
- Built a **5-year NPV financial model** (18% discount rate, 3.5% inflation adjustment) showing positive NPV across all adoption scenarios and non-discounted payback in Year 3, projecting **\$54.75M in annual airline savings**.
- Sized a **\$150M–\$300M serviceable market** and designed a 4-stream B2B SaaS revenue model spanning implementation fees, usage-based SaaS (\$2–\$5 per disrupted passenger), performance earnings, and ecosystem commissions.

Customer Portal Implementation – Medical Products LLC

Aug 2024 – Nov 2024

Advanced Project Management — ASU

- Led a **5-member team** through all 5 project lifecycle phases for a **\$250K portal implementation**, delivering within budget with **zero scope changes** after kickoff.
- Defined a **210-day critical path** across 48 tasks in MS Project using CPM and PERT estimation, with a time-phased budget allocating the largest share (**\$90K**) to backend/frontend development and integration.
- Identified **8 project risks** via Probability × Consequence matrices, classifying 2 as high-risk (Employee Turnover Rf=0.86; Learning Curve Rf=0.72) and developing tailored mitigation strategies for each.
- Built a RAM mapping **9 deliverables across 7 roles** with zero overlap, and designed a 6-channel communication plan covering weekly updates, milestone reviews, and crisis response across Zoom, Slack, Jira, and MS Teams.

FlazzMart – Ultra-Fast Grocery Delivery Startup

Fall 2024

Technology Entrepreneurship & Management — ASU TEM 501

- Projected revenue growth from **\$5M (Year 1) to \$100M (Year 5)** with gross margins scaling from 55% to 65% and break-even at Year 3, built around a \$3M seed ask targeting a 5× ROI.
- Identified a **\$40M revenue opportunity** in Phoenix metro over 3 years through TAM/SAM/SOM analysis against a \$68.6B U.S. online grocery market projected for 2032.
- Modeled **\$730 annual customer lifetime value** across a 4-stream revenue plan (delivery fees, subscriptions, vendor commissions, in-app advertising), benchmarking differentiation against Instacart, Amazon Fresh, and Walmart.

Heat Recovery from Solar PV Panels – Published Research

Jan 2023 – Nov 2023

Pillai College of Engineering — Major Engineering Project

- Improved PV panel efficiency by **11.6% (18.22% to 20.34%)** and reduced operating temperature by **3.82°C** through a forced-air convection system, delivered on schedule within a INR 7,020 budget.
- Validated results via a **2-day controlled experiment** using 6 K-type thermocouples and NI DAQ/LabVIEW; published findings in the *International Journal of Engineering Research & Technology*.

PROFESSIONAL EXPERIENCE

Arizona State University, Tempe, AZ

May 2025 – May 2026

Graduate Teaching Assistant

- Managed assignment and grading workflows for **50+ students** across multiple concurrent courses, coordinating with faculty to maintain consistent quality standards and on-time delivery each semester.
- Developed standardized evaluation rubrics adopted across all course sections, reducing grading inconsistencies and serving as the primary point of contact for student-faculty conflict resolution.

Tata Power, Mumbai, India

Jan 2024 – Apr 2024

Maintenance Trainee

- Coordinated preventive maintenance schedules across **2 generating units (750 MW total)**, tracking steam pressure, temperature, and flow rate via plant DCS to support management scheduling decisions.
- Collaborated across **3 cross-functional teams** to implement corrective actions within defined safety constraints, producing SOPs adopted across 2 critical systems with **zero safety incidents** over 14 weeks.

Matharu Sons, Navi Mumbai, India

Dec 2022 – Jan 2023

Process Optimization Trainee

- Managed **3 concurrent fabrication projects** (fuel tankers, 500–25,000L), delivering all on schedule and within scope, with zero client rework requests and **100% compliance** with quality and safety standards.

EDUCATION

Arizona State University – Ira A. Fulton Schools of Engineering, Tempe, AZ

May 2026

M.S., Management of Technology

GPA: 3.83/4.0

Pillai College of Engineering, Mumbai University, India

May 2024

B.Tech., Mechanical Engineering

CGPA: 7.78/10

SKILLS

PM: Project Planning, Scope & Change Management, Risk Management, Stakeholder Management, Budget Control, WBS, Quality Control, Resource Allocation **Methods:** Agile, Scrum, Waterfall, CPM, PERT, EVM, Kanban

Tools: MS Project, Jira, Notion, Excel, Tableau, PowerPoint, Slack, Zoom, Google Workspace **Certs:** Siemens Mobility PM Simulation — GE Aerospace Supply Chain Simulation
